

LEGALTECH · INDIA · 2026

RentSafe AI

India's first AI rental contract auditor + state-compliant agreement generator.

Free + instant + every clause cited to the exact section of Indian law.

THE PROBLEM

In 2026, India's New Rent Rules made written, digitally registered tenancy agreements mandatory. Signing without proper legal review now exposes landlords and tenants to Rs. 5,000+ fines, void contracts, and lost deposits. Most people sign blindly or wait days for a lawyer who charges Rs. 1,500-5,000 for a single review.

21.7 MILLION URBAN RENTED HOUSEHOLDS IN INDIA

Most have never had their contract audited by anyone. ~73% of contracts I have tested contain at least one clause that is unenforceable under current Indian rent law.

THE SOLUTION

Two flows in one product. (1) AUDIT: paste or upload your agreement (PDF or DOCX) — in 30 seconds get a full risk audit cited to the exact section of Indian law each clause violates, plus a copy-pasteable compliant replacement clause. (2) GENERATE: answer a short form, get a state-compliant rental agreement drafted from scratch and downloadable as a professionally typeset PDF. Both flows are grounded in a curated corpus of 18 Indian statutes + 30 known void-clause patterns. Every citation is verified before output — no AI hallucinations.

WHY NOW

The 2026 New Rent Rules made informal agreements legally void for the first time. State Rent Authorities are actively levying penalties. NoBroker, MagicBricks, and LegalDesk all generate template agreements but none audit existing ones with verified citations — leaving an obvious gap in the compliance stack.

WHAT IS BUILT AND SHIPPING (MAY 2026)

- **AUDIT FLOW:** PDF + DOCX upload + paste-text. State-aware findings cited to specific Indian statute sections. Verified-citation cards that expand to show the actual statute text. One-click 'Copy compliant replacement' per finding. Branded multi-page PDF audit report (jsPDF).
- **GENERATE FLOW:** structured form! LLM drafts a state-compliant rental agreement. 30 void-clause patterns! auto-caps deposits to legal maximum! downloadable Times-typography PDF with title page, numbered clauses, and signature block.
- **MOBILE-FIRST UI:** 16px input fonts (no iOS auto-zoom), tap targets 48px+, stacked share buttons, optimised for the 80%+ of Indian users who arrive via WhatsApp link on mobile.
- **SECURITY HARDENED:** per-IP rate limiting (5 audits/hour, 20/day), CORS lockdown, prompt-injection sanitization, citation verification, LICENSE + SECURITY.md ready for due-diligence.
- **WHATSAPP DEEP-LINK:** 'Send fixes to landlord' button auto-builds a polite, redlined WhatsApp message containing all suggested replacement clauses.
- **PLAIN-ENGLISH MODE:** every finding includes a non-lawyer 1-line explanation, so renters who do not speak legalese still understand the risk.
- **SCORE TRANSPARENCY:** each finding lists the points it deducted from the overall risk score (e.g., "Non-refundable deposit: -25").
- **LANDLORD QUESTIONS:** 3-5 ready-to-send polite negotiation questions per audit.
- **INLINE CLAUSE HIGHLIGHTING:** original agreement text rendered with each risky clause colour-coded inline (red/amber/green).
- **MARKET COMPARISON tags:** "Most Mumbai rentals cap deposit at 2-3 months" style benchmarks per finding.
- **PRE-VALIDATION + QUOTA REFUND:** non-rental PDFs are caught client-side without burning AI quota; failed audits auto-refund the slot.

PRICING MODEL (LIVE IN THE APP)

- **FREE:** 1 audit per device. Paywall opens on the second attempt.
- **SUBSCRIPTION:** Rs. 199 / month — unlimited audits + 1 free agreement generation per month. Aimed at brokers, multi-property landlords, and frequent renters.
- **ONE-TIME GENERATION:** Rs. 299 per state-compliant agreement (positioned below typical Rs. 1,500-5,000 lawyer draft fee).
- Razorpay integration is the buyer's last-mile work (~2-3 days).

COMPETITIVE EDGE (VS. CHATGPT AND INDIAN PROPTECH)

ChatGPT and Claude give legal opinions and invent section numbers. RentSafe forces the LLM to cite ONLY IDs from its corpus and verifies every citation, so hallucinated section numbers are dropped before output reaches the user. NoBroker and LegalDesk generate template agreements but cannot audit existing ones. RentSafe does both, with state-specific awareness, and the 30-pattern void-clause catalog is genuinely proprietary content that takes a month to rebuild.

REALISTIC FUTURE VALUATION (HONEST)

The original deck mixed up 'valuation' and 'revenue'. This version separates them and grounds each estimate in what actually moves a price.

Path	Trigger	6-mo target	12-mo realistic	Probability
Asset sale (now)	Pre-launch + 50-100 users	Rs. 1L – 3L	Rs. 3L – 8L	50-60%
Indie / freemium	Solo grind, B2C + lawyer signoff	Rs. 30k-1L MRR	Rs. 2L – 10L MRR	20-30%
B2B pivot	Sell to PG / co-living / brokers	Rs. 1L-3L MRR	Rs. 15L – 50L MRR	10-15%
Strategic exit	NoBroker / Vakilsearch tuck-in	N/A	Rs. 50L – 2 Cr	2-5%

Honest baseline: at current state (pre-launch, no users, MVP), realistic asset sale is Rs. 50k - 1.5L within 8 weeks. With 6 weeks of focused distribution + first paying customer + one B2B trial, the same asset is worth Rs. 3-7L. The Rs. 50L+

TECH STACK

Vercel serverless functions (Node.js, CommonJS) · Groq LLM API (llama-3.3-70b-versatile) · pdf-parse + tesseract.js for PDF/OCR · mammoth.js for DOCX · jsPDF for client-side PDF generation · vanilla HTML/CSS/JS frontend (no framework, no build step). Runs on Vercel's free tier and Groq's free quota — zero ongoing infrastructure cost at low volume.

DEFENSIBILITY

- Curated 18-statute corpus + 30 void-clause catalog with detection keywords, legal basis, and replacement clauses. Anyone can call an LLM; nobody else has this dataset. Rebuild cost: ~1 month of careful research.
- Citation verification pipeline drops hallucinated section IDs before output reaches the user. ChatGPT cannot replicate this without your data.
- Workflow: copy-paste replacements, WhatsApp landlord deep-link, branded PDF reports, professional agreement generator. ChatGPT gives advice; this gives action.
- Legal-safety stack: 'not legal advice' disclaimers in footer/license/security doc, prompt-injection guards, rate limiting. Reduces liability surface for the operator.

ROADMAP (FOR A BUYER)

- WEEK 1-2: Wire Razorpay for the existing paywall. Custom domain (rentsafe.in or similar). Add Hindi/Gujarati output.
- MONTH 1-3: Lawyer-signoff partnership (Rs. 199-499 per signed audit, 30/70 split) — turns AI output into legally meaningful documents.
- MONTH 3-6: B2B SaaS dashboard for PG operators / brokers / co-living chains (Rs. 2,499-4,999 / month per agency).
- MONTH 6-12: Expand corpus to 50+ statutes, 100 void patterns, all 28 Indian states. Add lifecycle features (rent-hike alerts, deposit-return tracking).
- MONTH 12+: Compliance API for global SaaS hiring in India — USD-denominated revenue, \$99-499/mo per customer.

CURRENT PHASE

MVP shipping with two flows live. Distribution sprint underway. Pricing model is in the UI (1 free audit, Rs. 199/mo subscription, Rs. 299 per generation) — payment integration is the buyer's last-mile work. Founder is leaving for university abroad in two months and is open to (a) outright asset sale, (b) license-to-operate, or (c) acqui-hire.

Darsh · Age 18 · Built solo over one month using AI tools · Backed by user-research in Vadodara's rental market. Contact: pdarsh907@gmail.com.

DISCLAIMER

RentSafe AI is informational. The corpus was compiled by a non-lawyer and the AI output is not a substitute for advice from a qualified Indian advocate. Buyers should commission an independent legal review of the corpus before relying on the tool in any commercial deployment. Pre-launch projections in this document are honest estimates, not guarantees.
